

Heater Transformer for Sapphire Ingot Power

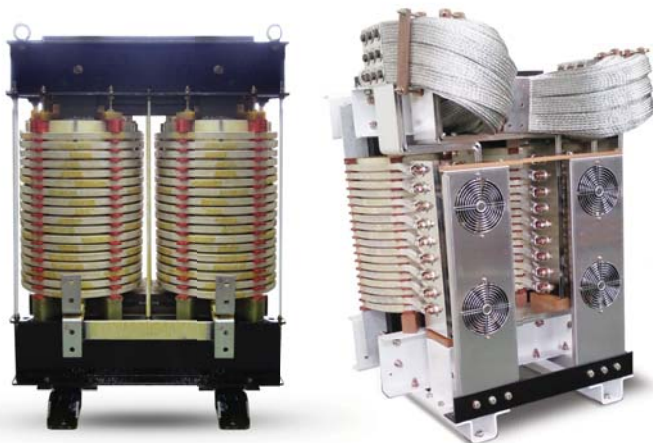

will be the company taking care of

Sapphire Ingot is the core materials making a emitting diode (LED) chips.

Heater transformer has low voltage and high current output to support stable and long time power supply.

This characteristic is essential function for productivity and production yield improvement.

Applications

For equipment for sapphire ingot power production

Product Details

- Single phase
- Input voltage : 380V
- Output voltage : 13.5V (Order production)
- Current : 12,000 ~ 20,000A (order production)
- Insulation : H class (the specifications can be changed according of the customer order)

We'll be the company taking
care of customer as priority
