

High-Frequency Reactor

will be the company taking care

Types	High-frequency reactor (AC, DC)
Applications	For high-frequency circuits, ESS Applying to electric power and electronics
Features	<ul style="list-style-type: none">- Minimizing load losses through using the winding method by flat winding machine- High efficiency, low noise- Applying a wide range frequency of 10 ~ 100KHz- The high-frequency response using super core and ferrite core

We'll be the company taking
care of customer as priority
